## Abstracts

The primary function of an Arc Fault Circuit Interrupters (AFCI) is to detect and identify dangerous grounding, parallel, and series Arc faults, and to actuate the device that disconnects the current in time to avoid electrical fire. When an arc fault occurs, because the current intensity is small, lower than the set value of the overcurrent protection widely installed in the power system, especially in the low-voltage distribution field, the installation of AFCI arc fault circuit breaker in the distribution line terminal can detect the arc in time and cut off the circuit, effectively reducing the loss caused by the arc.

According to our (Global Info Research) latest study, the global Arc Fault Circuit Interrupter (AFCI) market size was valued at US\$ 4243 million in 2023 and is forecast to a readjusted size of USD 4851 million by 2030 with a CAGR of 2.0% during review period.

Schneider Electric, ABB, Eaton, Siemens and Leviton are the major global fault arc breaker (AFCI) manufacturers. Schneider Electric is the world's largest manufacturer of faulted arc breakers (AFCI), accounting for 30% of the total global AFCI market, followed by ABB, which accounts for approximately 23% of the total global AFCI market turnover.

At present, AFCI is mainly divided into branch/feeder type, combined AFCI (CAFCEI) and others, of which combined AFCI (CAFCEI) is the main type of AFCI, accounting for about 74% of the global market.
