## Abstracts

According to our (Global Info Research) latest study, the global Antifriction Bearings market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An anti-friction bearing, also known as a rolling contact bearing, is justified over a journal or fluid film bearing when very little friction is needed for low differential surface speeds. Of course, the extra mechanical complexity of antifriction bearings drives up their cost when compared to similar journal bearings.

The global antifriction bearing market is anticipated to grow at a steady rate during the forecast period. The growing demand for commercial aircrafts will drive the growth prospects for the global antifriction bearing market until the end of 2025.

The Global Info Research report includes an overview of the development of the Antifriction Bearings industry chain, the market status of Automotive (Ball Bearings, Roller Bearings), Aerospace (Ball Bearings, Roller Bearings), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Antifriction Bearings.
