Abstracts

The global Architectural Aluminum Extrusions Profiles market size is expected to reach \$ 84779 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Extruded aluminum profiles for construction are metal materials made from aluminum alloys, formed into specific cross-sectional shapes through heating and extrusion. They are used in construction applications such as doors and windows, curtain walls, railings, roofs, decoration, and structural support, and are characterized by lightweight, corrosion resistance, machinability, and aesthetic appeal.

Upstream suppliers mainly include alumina, electrolytic aluminum, recycled aluminum, alloying elements, molds, surface treatment materials, and processing equipment. Downstream suppliers primarily serve the real estate development, commercial building, industrial plant, public infrastructure, building decoration engineering, and door and window curtain wall installation and maintenance markets. The global market price for extruded aluminum profiles for construction is \$2,733 per ton, with annual sales of approximately 21.15 million tons.

The global market for extruded aluminum profiles for construction will continue to develop towards green and low-carbon practices, high performance, and system integration. On the one hand, the increasing demand for energy-efficient buildings, green certification, and urban renewal will drive the accelerated expansion of the application of low-carbon aluminum, recycled aluminum, and high-weather-resistant profiles. On the other hand, window and curtain wall products are upgrading towards higher airtightness, watertightness, thermal insulation, and prefabricated construction, driving the growth in demand for thermally broken, lightweight, high-strength, and

customized deep-processed profiles. Simultaneously, with the improvement of architectural aesthetics and the popularization of smart buildings, profile products will place greater emphasis on surface treatment, multi-functional integration, and collaborative design with window and curtain wall systems. Industry competition will gradually shift from simple material supply to competition based on comprehensive solution capabilities.
