Abstracts

The global Architectural Ceramics market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ceramics are a material often used in construction, made from a mixture of minerals, typically silica sand, with a clay binder and some impurities, and up to 30% water. They are fired at a higher temperature than bricks, so that the silica re-crystallises to form a glassy material that has greater density, strength, hardness, resistance to chemicals and frost and a greater dimensional stability.
