According to our (Global Info Research) latest study, the global Archiving Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Archiving software or file archiver is a computer application which aids in combining a number of files into single archive file or number of archive files. Different files containing data which are not in current use and will be required for future reference, data from these files can be concatenated into archives. The archives will store metadata, the names and lengths of the files been archived. Additional information can be stored such as timestamps, metadata, file attributes, and more. These data archives are indexed in a manner that part of file or data can be searched and retrieved.

Increasing adoption of cloud services involving archiving is driving the demand of archiving software market. As companies continue to move production data to public cloud services, the demand for public cloud archiving software is expected to increase. Moreover, with increasing usage of public cloud services for data storage by companies, the requirement for backup creates demand for software providing second copies including archiving software. This will result in maintaining diverse data sets across multiple cloud servers, so as to minimize the risk of data loss.
