According to our (Global Info Research) latest study, the global ArF Dry Resist market size was valued at US\$ 10.9 million in 2024 and is forecast to a readjusted size of USD 13.7 million by 2031 with a CAGR of 3.4% during review period.

Photoresist is composed of solvent, photoinitiator (including photo sensitizer and photo acid generator), photoresist resin, monomer and other additives. It has photochemical sensitivity. Photoresist can use photochemical reaction to transfer the required fine patterns from the mask to the substrate to be processed through lithography processes such as exposure and development. ARF dry photoresist is the photoresist dried by argon.
