## Abstracts

According to our (Global Info Research) latest study, the global ArF Excimer Lasers market size was valued at USD 19 million in 2023 and is forecast to a readjusted size of USD 32 million by 2030 with a CAGR of 8.2% during review period.

Excimer refers to a condition where molecular elements are in a highly excited and unstable state. Normally, atoms and molecules move with a specific energy. If they receive extra energy from an external source, these atoms and molecules move with higher energy. This is called an excited state. After a while the atoms and molecules release this extra energy and return to their normal energy state. When this happens, the released energy is transformed into light. This process is called 'spontaneous emission.' When this light collides with other atoms and molecules that have high energy, light with the same properties is emitted. This is called 'stimulated emission.'

Global key players of ArF Excimer Lasers include Coherent, Cymer (ASML), Gigaphoton, Beijing RSLaser, MLase AG, etc. The top three players hold a share over 50%.
