Abstracts

According to our (Global Info Research) latest study, the global Arm Disc Brake market size was valued at US\$ 223 million in 2025 and is forecast to a readjusted size of US\$ 297 million by 2032 with a CAGR of 3.2% during review period.

In 2025, the global production of boom disc brakes reached 255,500 units, with an average selling price of US\$850 per unit. The global annual production capacity of boom disc brakes is approximately 350,000 units, with a gross profit margin of approximately 17.2%. Boom disc brakes are common braking components used in industrial equipment, specifically designed to decelerate, stop, or position rotating parts (such as motors, spindles, worktables, turntables, etc.). They achieve braking by converting the kinetic energy of the braked component into heat energy, typically generated by one or more friction surfaces (friction surfaces on the friction disc/arm plate) clamping or pressing together under the action of a driving source (pneumatic, hydraulic, or mechanical force). The upstream of the boom disc brake industry chain includes metal materials and alloys, friction materials and coatings, seals, and lubricants; the midstream consists of boom disc brake manufacturers; and the downstream mainly comprises industries such as machinery, metallurgy, and electrical engineering.
