Abstracts

According to our (Global Info Research) latest study, the global Arm-type Wrapping Machine market size was valued at US\$ 959 million in 2025 and is forecast to a readjusted size of US\$ 1464 million by 2032 with a CAGR of 6.2% during review period.

Arm-type wrapping machines are pallet wrapping systems in which a rotating mechanical arm applies stretch film around stationary loads, making them particularly suitable for heavy, unstable, or integrated production-line applications where the pallet itself cannot rotate. These machines are widely used in manufacturing plants, logistics centers, food and beverage facilities, and building material industries to secure palletized goods for storage and transportation. From a value chain perspective, upstream activities include steel structures, motors and drives, control systems, stretch film pre-stretch units, and safety components, midstream processes focus on machine assembly, automation integration, control programming, and functional testing, while downstream demand is driven by manufacturing enterprises, warehouses, distribution centers, and system integrators. In 2025, the average selling price of arm-type wrapping machines is approximately US\$12,600 per unit, with global sales volume reaching around 74 thousand units. The industry maintains a gross margin of 30%–45%, supported by higher mechanical complexity than turntable machines, customization for load characteristics, and growing adoption in automated logistics environments.
