According to our (Global Info Research) latest study, the global Aromatic Diol Chain Extender market size was valued at US\$ 45.00 million in 2025 and is forecast to a readjusted size of US\$ 76.07 million by 2032 with a CAGR of 8.0% during review period.

Aromatic diol chain extenders (such as HQEE and HER) are low-molecular-weight diols containing benzene rings, hydroxyl groups, and ether bonds in their molecular structure. They are mainly used in MDI-type polyurethane elastomers to improve the material's hardness, tear strength, and heat resistance. Compared to diamine chain extenders, they are non-toxic, environmentally friendly, and have a longer lifespan in the reactor.

The upstream of their industrial chain heavily relies on basic petrochemical intermediates, with key raw materials including hydroquinone, resorcinol, and ethylene oxide. The chemical purity and isomer content of the raw materials directly determine the crystallinity of the chain extender and the mechanical limits of the final polymer. The midstream is the fine synthesis stage, with core technologies lying in the conversion rate control of addition reactions and high-purity recrystallization processes, aiming to eliminate trace acidic impurities that may lead to polyurethane degradation.

Global sales in 2025 were approximately 14,803 tons, with an average selling price of US\$2,954 per ton. The industry's gross profit margin is between 20% and 30%.
