## Abstracts

According to our (Global Info Research) latest study, the global Aromatic Isocyanate Prepolymer market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An isocyanate prepolymer is a type of polyurethane prepolymer in which all of the polyol hydroxyl end groups have reacted with isocyanate groups. The end result is a compound with isocyanate functionality at the termini instead of hydroxyls.

Depending on whether it contains a benzene ring, isocyanates can generally be divided into aromatic isocyanates and aliphatic isocyanates. Aromatic isocyanates are isocyanates where the NCO group is directly attached to an aromatic ring. Aromatic isocyanates are used in applications where color stability and UV resistance are not necessary.
