## Abstracts

According to our (Global Info Research) latest study, the global Aromatic Peroxy Acid market size was valued at US\$ 771 million in 2025 and is forecast to a readjusted size of US\$ 1063 million by 2032 with a CAGR of 4.7% during review period.

Aromatic Peroxy Acids are a class of organic peroxides in which a peroxy functional group ( $\text{-COOOH}$ ) is directly attached to an aromatic ring (such as benzene), giving them strong oxidizing properties, relatively higher stability than aliphatic peroxy acids, and selective reactivity in organic synthesis, bleaching, and disinfection applications. The supply chain begins upstream with petrochemical-derived aromatic feedstocks (e.g., toluene, benzoic acid, or substituted aromatics) and oxidizing agents such as hydrogen peroxide, typically produced by large chemical companies. In the midstream, specialty chemical manufacturers synthesize aromatic peroxy acids through controlled peroxidation processes under strict safety conditions due to their reactive and potentially hazardous nature, followed by formulation, stabilization, and packaging (often diluted or in solution form for safer handling). Downstream, these compounds are distributed to industries including pharmaceuticals (for oxidation reactions), fine chemicals, polymer processing, pulp & paper bleaching, and specialty cleaning/disinfection, usually via chemical distributors or direct industrial supply agreements. In 2025, global Aromatic Peroxy Acid output was about 460,000 tons with 600,000 tons of capacity, average prices of USD 1,500-2,500 per ton, and gross margins around 24%.
