Abstracts

According to our (Global Info Research) latest study, the global Aromatic Triglycidylamine market size was valued at US\$ 264 million in 2025 and is forecast to a readjusted size of US\$ 404 million by 2032 with a CAGR of 6.2% during review period.

Aromatic Triglycidylamine is a class of high-performance epoxy resin intermediates in which three glycidyl (epoxy) groups are attached to an aromatic amine core (such as diaminodiphenylmethane or related benzene-based structures), giving the material high thermal stability, rigidity, and excellent chemical resistance; it is widely used in aerospace composites, electronic encapsulation, adhesives, and high-end coatings. The supply chain starts upstream with petrochemical-derived raw materials such as aromatic amines (e.g., aniline derivatives) and epichlorohydrin, along with catalysts and solvents supplied by basic chemical producers; midstream, specialty epoxy resin manufacturers synthesize aromatic triglycidylamine through glycidylation reactions under controlled conditions and further purify and formulate it into resins or curing systems; downstream, the material is processed by composite manufacturers, electronics companies, and industrial coating producers into prepregs, laminates, encapsulants, and structural adhesives, which are then supplied to end-use sectors such as aerospace & defense, automotive electronics, semiconductors, and industrial equipment. In 2025, global Aromatic Triglycidylamine output was about 70,000 tons with 100,000 tons of capacity, average prices of USD 3,000–5,000 per ton, and gross margins around 27%.
