According to our (Global Info Research) latest study, the global Arthroscopic Suction Cutter market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Arthroscopic suction cutter refers to a medical device used for arthroscopic surgery. Arthroscopy is a minimally invasive surgical procedure that allows surgeons to use the specialized instrument of an arthroscope (inserted into a joint through a small incision) to observe, diagnose, and treat joint-related problems.

Arthroscopic suction cutters combine suction and cutting functions in one device. It usually consists of a suction mechanism that clears fluid and debris from the joint space, and a cutting mechanism that allows the surgeon to precisely cut or trim tissue as needed during surgery. Suction helps maintain a clear view by removing blood and other fluids, while cutting capabilities enable precise tissue removal or reshaping.
