Abstracts

Arthroscopy (also called arthroscopic or keyhole surgery) is a minimally invasive surgical procedure on a joint in which an examination and sometimes treatment of damage is performed using an arthroscope, an endoscope that is inserted into the joint through a small incision. Arthroscopic procedures can be performed during ACL reconstruction.

Scope of the Report:

This report focuses on the Arthroscopy in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. North America dominated the global scenario in terms of revenue in 2015 owing to the high adoption rate for arthroscopic procedure; increasing prevalence of joint related disorders, such as osteoarthritis, rheumatoid arthritis, and sports injuries; and the increasing geriatric population.

China is one of the biggest opportunities for arthroscopy due to high incidence of musculoskeletal disorders, rising aging population and a strong medical device manufacturing sector. China is expected to be an evolving country for key companies due to the presence of target population and high unmet clinical needs. Global share of China is estimated to be over 30.0% in 2024.

The worldwide market for Arthroscopy is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
