The global Articulated Mining Truck Transmission market size is expected to reach \$ 269 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

Articulated mining truck transmissions are the core drivetrain components used in articulated dump trucks (ADTs). They primarily function to shift gears and amplify torque from the engine output to meet the demands of low-speed, heavy-load operations, frequent starts and stops, and complex terrain in construction sites and mines. They typically employ powershift or fully automatic transmissions, combined with a torque converter and planetary gear system to enhance smoothness and durability. In terms of price, they generally range from \$30,000 to \$120,000 per unit, with mainstream configurations concentrated in the \$50,000 to \$100,000 range. Demand for articulated mining trucks is projected to exceed 3,000 units by 2025.
