The global Articulated Truck Tires market size is expected to reach \$ 1418 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Articulated truck tires are off-road (OTR) tires specifically designed for articulated dump trucks (ADTs). They are primarily used in complex working conditions such as mines, quarries, and earthmoving operations. They feature high load-bearing capacity, wear and cut resistance, and good grip. They typically employ a radial construction and are equipped with E3 or E4 tread patterns to adapt to various working environments, including mud, gravel, and rock. Their prices vary considerably depending on size and performance rating, with mainstream sizes (such as 26.5R25 and 29.5R25) generally costing between \$1,000 and \$5,000 per tire.

This report studies the global Articulated Truck Tires production, demand, key manufacturers, and key regions.
