According to our (Global Info Research) latest study, the global Artificial Chest Wall market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The artificial chest wall belongs to the prosthesis transplanted into the human body by surgery. It is composed of a tough film layer and artificial ribs sandwiched therein, and there are stainless steel wires in the ribs. The flexible membrane layer is made of knitted polyester cloth and the artificial ribs are made of low pressure polyethylene. During the operation, the stainless steel wire is wound around the fracture end of the human body rib, and the tough film layer and the physiological tissue around the wound are sutured with polyester fiber thread. The artificial chest wall is applied to the repair of chest wall defects, which can avoid chest wall deformity and fully restore chest wall function after rehabilitation.
