Abstracts

The global Artificial Conductive Graphite Paper market size is expected to reach \$ 498 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

In 2025, global Artificial conductive graphite paper production reached approximately 21 kilotons, the average price is 15000 usd/ton. Artificial conductive graphite paper is a sheet-like conductive functional material made from high-purity artificial graphite powder or flake graphite as the main raw material through specific molding processes such as pressing, rolling, or coating. It has excellent anisotropic or isotropic conductivity, high thermal conductivity, resistance to high and low temperatures, corrosion resistance, and good flexibility and processability. Unlike natural graphite paper, its performance can be more precisely controlled through raw material ratios and process parameters.

Market Concentration and Major Players:

Internationally, the market for artificial conductive graphite paper is highly concentrated, primarily in developed countries such as Europe, the US, and Japan. Large manufacturers include Panasonic Industry and NeoGraf Solutions. Domestically, however, there is still significant room for growth in the artificial conductive graphite paper market.

Manufacturing Process and Market Trends:

Manufacturing processes are largely based on carbonaceous precursors such as petroleum coke or polyimide film. After crushing and kneading, the graphitization lattice is reconstructed at temperatures above 2800 degrees Celsius. The final thickness is

then determined through precision calendering or roll forming, with surface coatings or composite reinforcement treatments used when necessary to balance conductivity and mechanical properties.

Market trends are primarily driven by demand from new energy battery current collectors, electric vehicle thermal management, 5G electronic heat dissipation, and electromagnetic shielding. Product iteration focuses on higher thermal and electrical conductivity uniformity, thinner and more flexible designs, and multifunctional integration through multi-layer composite structures. Simultaneously, the localization of low-carbon and energy-saving graphitization technology and key equipment is becoming a key focus for the industry.

This report studies the global Artificial Conductive Graphite Paper production, demand, key manufacturers, and key regions.
