Artificial crystal refers to a crystal material produced by simulating the natural crystal growth process through artificial methods. Compared with natural crystal, artificial crystal is extremely similar in composition, structure, and appearance, but its production process is more controllable, resulting in higher yields and more stable quality. It is commonly used in jewelry, decorations, and optical components due to its dazzling gloss and excellent physical properties. The manufacturing process of artificial crystal in industrial production involves complex chemical and physical processes, including raw material proportioning, melting, crystallization, and other steps to ensure the quality of the final product meets specific requirements.
