According to our (Global Info Research) latest study, the global Artificial Disc market size was valued at USD 2445.5 million in 2023 and is forecast to a readjusted size of USD 6738.1 million by 2030 with a CAGR of 15.6% during review period.

Artificial disc replacement, also known as intervertebral disc arthroplasty, total disc replacement, or spine arthroplasty, is a spine surgery procedure to replace a diseased or damaged intervertebral disc with an artificial joint. A qualified spine surgeon removes the problem disc and places a metal or metal-and-plastic mechanical device between the vertebrae (individual bones of the spine).

The goal of artificial disc replacement is to relieve chronic back pain. Artificial disc replacement is an excellent alternative to spinal fusion surgery for certain patients. The artificial disc allows the spine to have much greater mobility than can be achieved with spinal fusion surgery.
