## Abstracts

The global Artificial Fibrous Casing market size is expected to reach \$ 1932 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032). Synthetic fiber casings are food-grade tubular products made from cellulose or synthetic fibers, primarily used in the sausage and processed meat products industry. They feature uniform diameter, good strength and elasticity, facilitating uniform filling, cooking, and slicing while ensuring food safety and hygiene. The synthetic fiber casing industry chain includes upstream raw materials such as cellulose, collagen substitutes, and synthetic fibers; midstream manufacturing encompasses fiber spinning, casing forming, plasticizing, drying, and quality testing; and downstream applications include sausage producers, meat processing plants, and packaged meat product manufacturers. Supporting services include warehousing, logistics, and food safety regulatory compliance. In 2025, global production of synthetic fiber casings was approximately 305 million meters, with an average global market price of approximately US\$4 per meter. The gross profit margin of major companies in the industry ranged from 30% to 50%. In 2025, global production capacity of synthetic fiber casings was approximately 381 million meters.
