Abstracts

According to our (Global Info Research) latest study, the global Artificial Garden Grass market size was valued at US\$ 3704 million in 2025 and is forecast to a readjusted size of US\$ 5938 million by 2032 with a CAGR of 7.9% during review period.

In 2025, global Artificial Garden Grass reached approximately 573,682 k Sqm, with an average global market price of around US\$ 6,275 per k Sqm. Gross margin is about 44%. The cost is 3,514 usd. Production Capacity is about 600,000 k Sqm. Artificial Garden Grass, is synthetic turf that mimics the look and feel of natural grass, but is made from synthetic materials. These turfs are primarily used for athletic fields, landscaping, and other applications that require a durable, low-maintenance turf.

The artificial garden grass market is expected to continue expanding as consumers and property developers increasingly seek low-maintenance, aesthetically pleasing, and sustainable landscaping solutions for residential, commercial, and public spaces. Advances in synthetic turf materials?including enhanced UV resistance, softer and more natural fiber textures, improved drainage systems, and recyclable or bio-based polymers?will raise the performance and environmental profile of garden grass products. Growing awareness of water conservation and the rising costs of natural lawn upkeep will further encourage adoption, particularly in arid and drought-prone regions. Integration with smart landscaping technologies such as automated irrigation and IoT-based soil and moisture sensors will support adaptive outdoor space management, while customizable and modular turf solutions will cater to diverse design aesthetics, from balconies and terraces to large gardens. In addition, service models that bundle installation, maintenance, and end-of-life recycling will emerge to meet consumer demand for convenience and sustainability, driving deeper market penetration across

residential and commercial segments.
