## Abstracts

Artificial general intelligence (AGI) is the intelligence of a machine that could successfully perform any intellectual task that a human being can.

### SCOPE OF THE REPORT:

Unlike many early AI solutions that were designed and implemented with a narrow focus, AGI includes solutions capable of solving problems in many different domains and across many different industry verticals including 3D design, securing enterprise data, securing public facility and personnel, financial trading, healthcare solution, autonomous vehicles and smart mobility, online search, and many other areas.

AGI research has a science (theory) aspect and an engineering (technique) aspect. A complete AGI work normally includes: a theory of intelligence, a formal model of the theory, and a computational implementation of the model.

The global Artificial General Intelligence (AGI) market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Artificial General Intelligence (AGI).

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
