Abstracts

The global Artificial Hip Joint Implant market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In a hip replacement, surgeons remove the damaged portion of the hip joint and replace it with parts made of metal, ceramic, and hard plastic. This artificial joint (prosthesis) can help relieve pain and improve the function of the hip joint. Hip replacement, also known as total hip arthroplasty, is also an option if hip pain is interfering with daily activities and non-surgical treatments are not effective or no longer effective. Arthritic injury is the most common cause of hip replacement surgery.

This report studies the global Artificial Hip Joint Implant production, demand, key manufacturers, and key regions.
