Artificial Intelligence (AI) for Security refers to a comprehensive security technology system that applies artificial intelligence technologies such as deep learning, computer vision, and natural language processing to the field of security, integrating with hardware devices, software platforms, and data services. It realizes intelligent perception, real-time analysis, accurate identification, and proactive early warning of security risks by processing massive multi-source data (video streams, network logs, environmental signals, etc.), covering both physical security scenarios such as public area monitoring and perimeter defense, and cyber security fields including threat detection and vulnerability mining, which significantly improves the automation, precision, and initiative of security work.

Driven by the global emphasis on public security, the acceleration of digital transformation in various industries, and the increasingly sophisticated and diversified security threats, the demand for AI for Security maintains strong growth momentum, with prominent demand in government governance, smart cities, finance, and industrial fields. Business opportunities lie in developing customized solutions for vertical industries such as smart transportation and smart campuses, promoting the deep integration of edge AI and security equipment to enhance real-time response capabilities, exploring data-driven security operation services to realize value-added transformation, and expanding emerging markets such as the Middle East and

Southeast Asia while strengthening compliance construction to meet global data privacy and security regulations.
