The global Artificial Intelligence (AI) in Oncology market size is expected to reach \$ 2453.5 million by 2029, rising at a market growth of 21.8% CAGR during the forecast period (2023-2029).

A variety of anticancer drugs are discovered, and their mechanism of action is predicted by using artificial intelligence. Various medicines and cancers are able to react differently; this information from screening processes reveals the links between therapeutic activities and the cancer genome. AI is also used to fight against resistance to anticancer drugs. Cancer treatment, imaging, screening, and medication are various domains in which AI is used. Among these, cancer imaging is the most innovative. The advancement of technology and the use of AI in cancer diagnostics drive the expansion of the healthcare industry. The artificial tools require low-cost diagnostic processes and quick detection data reporting.
