Abstracts

According to our (Global Info Research) latest study, the global Artificial Intelligence Data Sculpture market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Artificial intelligence data sculpture is the application of AI algorithms to artworks, so that the data generated by the algorithm can display a visual sensory experience different from traditional 2D on the screen. It is processed into a rotating visualization of how the computer sees the world by using artificial intelligence-driven machine learning algorithms. These techniques are used to filter and/or expand raw materials, which are then displayed on large screens or projected onto walls and entire buildings.

As an important force driving a new round of scientific and technological revolution, artificial intelligence has been of national strategic importance. Many governments introduces polices and increase capital investment to support AI companies. The Digital Europe plan adopted by the European Union will allocate ?9.2 billion on high-tech investments, such as supercomputing, artificial intelligence, and network security. In order to maintain its leading position, the United States will increase its investment in artificial intelligence research and development in non-defense fields, from US\$1.6 billion to US\$1.7 billion in 2022. According to the latest data released by IDC, global artificial intelligence revenue was US\$432.8 billion in 2022, a year-on-year increase of 19.45%, including software, hardware and services.
