Abstracts

According to our (Global Info Research) latest study, the global Artificial Intelligence Drug Discovery Platform market size was valued at US\$ 2161 million in 2025 and is forecast to a readjusted size of US\$ 5189 million by 2032 with a CAGR of 12.7% during review period.

An Artificial Intelligence Drug Discovery Platform is an integrated software–data–(often) automation stack that applies machine learning/generative AI and computational chemistry/biology to industrialize early drug R&D. In practice, it unifies (1) data ingestion and curation (multi-omics, chemical libraries, assay/phenotypic data, literature/knowledge graphs), (2) computational engines to identify/prioritize targets, generate or screen molecules, and predict key properties (potency, selectivity, ADMET, developability), and (3) workflow tools that connect in-silico design with wet-lab “build-test-learn” cycles so experimental results continuously improve models and decision making. Some platforms are end-to-end and span biology ? chemistry ? preclinical decision support (typified by “platform biotech” approaches), while others focus on a core layer such as physics-based molecular modeling or foundation-model development/deployment for biology that partners integrate into their pipelines. The industrial chain of Artificial Intelligence Drug Discovery Platforms includes upstream elements such as computing infrastructure, cloud services, GPUs, algorithm toolkits, biomedical databases, chemical libraries, assay results, and data labeling/curation resources. The midstream focuses on platform development and integration, including data engineering, model training, generative design modules, workflow orchestration, security, and compliance features. Downstream users include pharmaceutical companies, biotechnology firms, research institutes, and service organizations that apply the platforms to discover and optimize drug candidates. Supporting services cover

implementation, customization, model monitoring, validation, training, and ongoing technical support.
