According to our (Global Info Research) latest study, the global Artificial Intelligence in Diabetes Management market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Artificial Intelligence in diabetes management is an automation system which employs a computer system that gathers data, understands, reasons, and learns how the information effects outcomes over time. That the system ingests massive amounts of information—both structured and unstructured data—such as databases that have categorical variables, health records, and the scientific lexicon in research papers all of which is ingested and processed to make connections and then draw conclusions through a process of learning over time to increase in accuracy.

As an important force driving a new round of scientific and technological revolution, artificial intelligence has been of national strategic importance. Many governments introduces polices and increase capital investment to support AI companies. The Digital Europe plan adopted by the European Union will allocate ?9.2 billion on high-tech investments, such as supercomputing, artificial intelligence, and network security. In order to maintain its leading position, the United States will increase its investment in artificial intelligence research and development in non-defense fields, from US\$1.6 billion to US\$1.7 billion in 2022. According to the latest data released by IDC, global artificial intelligence revenue was US\$432.8 billion in 2022, a year-on-year increase of 19.26%, including software, hardware and services.
