Abstracts

According to our (Global Info Research) latest study, the global Artificial Intelligence in IT Operations (AIOps) market size was valued at US$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Artificial Intelligence in IT Operations (AIOps) refers to the integration of artificial intelligence (AI) and machine learning (ML) technologies into IT operations to enhance and automate various tasks and processes. AIOps leverages advanced analytics, data processing, and automation to monitor, analyze, and manage IT infrastructure, applications, and services more efficiently and proactively.

China and the United States are two leaders in AI industry. On the AI 100 list (2022) released by CB Insights, the number of companies in the United States ranks first, with more than 70 companies, followed by the United Kingdom, with 8 companies on the list. China and Canada both holds 5 companies on the list. According to data from the China Academy of Information and Communications Technology, the scale of China's core artificial intelligence industry reached ?508 billion in 2022, a year-on-year increase of 18%. From 2013 to November 2022, the cumulative number of patent applications for artificial intelligence inventions in the world reached 729,000, and the cumulative number of applications in China reached 389,000, accounting for 53.4%. However, the Global Artificial Intelligence Innovation Index Report 2021 released by the China Institute of Scientific and Technological Information shows that the overall strength of the United States is still far ahead. The number of artificial intelligence companies in the United States is about 4,670, while China has only 880. China's data center is less than 1/122 of that of the United States.
