Abstracts

The AI market is entering a dynamic phase of growth where adoption in the enterprise sector continues unabated, but there are questions emerging within research and academic circles about whether the technologies fueling the AI revolution, particularly deep learning, might be hitting a bottleneck. The recent controversy surrounding Facebook and data privacy, AI safety and explainability with Uber's self-driving car fatality, or questions about authenticity and the power of generative algorithms to create fake images and video, are all issues that highlight the risks and challenges facing AI in 2018. The challenges are to be expected as we move from a hype phase into a reality phase as part of the cycle of AI market development. Tractica sees these challenges as part of the maturity curve for AI, where the next few years will see a sobering of expectations, while the momentum around use cases and applications continues to build.

Scope of the Report:

This growth is evidenced in Tractica's most recent update to the firm's AI market forecasts model, which is built upon a taxonomy of 294 real-world use cases for AI, distributed across 30 different industry sectors. Compared to 6 months ago, Tractica sees continued growth in use cases, adding 28 new use cases in this iteration of the model. Telecommunications, consumer (internet services), advertising, healthcare, automotive, and retail are some of the big industry verticals that will lead in AI adoption.
