The global Artificial Intelligence of Things (AIoT) Software market size is expected to reach $ 48478 million by 2032, rising at a market growth of 12.7% CAGR during the forecast period (2026-2032).

Artificial Intelligence of Things (AIoT) Software refers to software solutions that integrate Artificial Intelligence (AI) technologies with Internet of Things (IoT) platforms to enable intelligent connectivity, data collection, analytics, automated decision-making, and management of connected devices. AIoT software combines technologies such as machine learning, deep learning, computer vision, natural language processing, edge computing, and big data analytics to process and analyze large volumes of data generated by sensors, smart devices, industrial equipment, and connected systems in real time. These capabilities enable improved operational efficiency, predictive maintenance, automation, and intelligent control of IoT environments. AIoT software typically includes IoT cloud platforms, device management platforms, edge AI software, data analytics platforms, AI model management systems, and industry-specific intelligent applications. It is widely used in smart manufacturing, smart cities, intelligent transportation, energy management, healthcare, agriculture, retail, logistics, and consumer electronics. Driven by the development of 5G, edge computing, digital twins, and generative AI technologies, AIoT software is transforming traditional IoT systems from simple connectivity platforms into intelligent systems capable of autonomous analysis, decision-making, and control.
