Artificial Joint Implant refers to medical implant devices designed to replace damaged or diseased human joints and restore mobility and function. These implants are mainly manufactured from biocompatible materials such as titanium alloys, cobalt-chromium alloys, ceramics, and advanced polymers. Common applications include hip replacement, knee replacement, shoulder replacement, and other orthopedic reconstruction procedures. The product scope includes artificial joint prostheses and related implant components, excluding surgical instruments and external orthopedic devices.

The industry chain of Artificial Joint Implant includes upstream biomaterials, midstream implant manufacturing, and downstream orthopedic applications. Upstream suppliers provide medical-grade metals, ceramics, polymers, and surface treatment materials. Midstream manufacturers conduct precision machining, molding, coating, sterilization,

quality inspection, and product development. Downstream applications include hospitals, orthopedic clinics, and medical institutions performing joint replacement surgeries and orthopedic treatment procedures.
