## Abstracts

According to our (Global Info Research) latest study, the global Artificial Lift market size was valued at USD 11220 million in 2023 and is forecast to a readjusted size of USD 13940 million by 2030 with a CAGR of 3.2% during review period.

Artificial lift is a method used to lower the producing bottomhole pressure (BHP) on the formation to obtain a higher production rate from the well. This can be done with a positive-displacement downhole pump, such as a beam pump or a progressive cavity pump (PCP), to lower the flowing pressure at the pump intake. It also can be done with a downhole centrifugal pump, which could be a part of an electrical submersible pump (ESP) system. Most oil wells require artificial lift at some point in the life of the field, and many gas wells benefit from artificial lift to take liquids off the formation so gas can flow at a higher rate.

The major players in global Artificial Lift market include Weatherford, Schlumberger, General Electric, etc. The top 3 players occupy about 50% shares of the global market. North America is the main market, and occupies over 60% of the global market. ESP is the main type, with a share about 45%. Onshore and Offshore are main applications.
