Abstracts

Artificial lift is a method used to lower the producing bottomhole pressure (BHP) on the formation to obtain a higher production rate from the well. This can be done with a positive-displacement downhole pump, such as a beam pump or a progressive cavity pump (PCP), to lower the flowing pressure at the pump intake. It also can be done with a downhole centrifugal pump, which could be a part of an electrical submersible pump (ESP) system. Most oil wells require artificial lift at some point in the life of the field, and many gas wells benefit from artificial lift to take liquids off the formation so gas can flow at a higher rate.

Scope of the Report:

This report focuses on the Artificial Lift Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The North American artificial lift systems market is anticipated to witness high growth over the forecast period. This growth is ascribed to the advances in the field of shale gas discovery and availability of low-pressure oil wells in the region. Additionally, the U.S. is expected to witness high growth in unconventional resources such as shale oil, tight oil, and growing marginal well count, which is anticipated to spur the future artificial lifts demand in North America.

The worldwide market for Artificial Lift Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
