According to our (Global Info Research) latest study, the global Artificial Liver Support Systems market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The artificial liver support system is an extracorporeal support system that temporarily replaces some functions of the liver. Its therapeutic mechanism is based on the strong regenerative ability of liver cells. Through mechanical, physical, chemical and biological devices in vitro, it can remove various harmful substances, supplement essential substances, and improve internal organs. The environment creates conditions for liver cell regeneration and liver function recovery, or serves as a bridge before liver transplantation. It can be divided into three types: non-biological, biological and mixed.
