Abstracts

The global Artificial Meniscus Implant market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The artificial meniscus implant is used to fill meniscal defects that result from partial meniscectomy. The artificial meniscus implant is inserted into a patient's knee through a small incision (two to three inches). Because of its special design, featuring a thick rim and a thinner center, the device stays in place – even when squatting – without being attached to bones or any other surrounding tissue.

This report studies the global Artificial Meniscus Implant production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Artificial Meniscus Implant, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
