Abstracts

The global Artificial Mica Tapes market size is expected to reach \$ 905 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

Artificial mica tape is a high-performance fire-resistant and insulating material made from synthetic mica paper as the base material, bonded together with adhesives and reinforcing materials such as fiberglass cloth. Its core raw material-synthetic mica-is large-sized, fully crystalline mica crystals artificially synthesized under normal pressure by replacing hydroxyl groups with fluoride ions. This characteristic allows it to surpass natural mica in many key properties. In terms of performance, in addition to possessing the characteristics of natural mica such as a low coefficient of thermal expansion, high dielectric strength, and high resistivity, artificial mica tape's most significant advantage is its excellent high-temperature resistance.

In 2025, global Artificial Mica Tape sales reached approximately 39,891 Tons, with an average global market price of around 15 US\$/Kg. Production capacity reached 45,000 Tons, with a gross profit margin of approximately 42%.

This report studies the global Artificial Mica Tapes production, demand, key manufacturers, and key regions.
