## Abstracts

An artificial organ is a device which is man-made and is integrated or implanted into the human in order to restore target function via the replacement of a natural organ. The material used to develop body interfaces or implants are known as biomaterials. Processing abilities that are not occurring naturally can be constructed and installed with the help of artificial organs and replaced function need not be in the context of life support but generally, it is to support life.

According to our (Global Info Research) latest study, the global Artificial Organ And Bionics market size was valued at USD 25000 million in 2022 and is forecast to a readjusted size of USD 35540 million by 2029 with a CAGR of 5.2% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

North America held the largest share in the artificial organ or medical bionic implant space, followed by Europe. However, the market is emerging due to the rise in population coupled with awareness among the players and the patients. Growing income levels, increasing healthcare expenditure, less competition than mature countries are the factors which are responsible for increasing the market players' interest in emerging markets. Asia-Pacific region is expected to rise and hold a larger share of this market in near future because of the rise in medical tourism, improvement in healthcare infrastructure and others.
