Abstracts

The global Artificial Pancreas Devices Systems market size is expected to reach \$ 276 million by 2032, rising at a market growth of 11.8% CAGR during the forecast period (2026-2032).

The Artificial Pancreas Device System is a system of devices that closely mimics the glucose regulating function of a healthy pancreas.

Most Artificial Pancreas Device Systems consists of three types of devices already familiar to many people with diabetes: a continuous glucose monitoring system (CGM) and an insulin infusion pump. A blood glucose device (such as a glucose meter) is used to calibrate the CGM.

A computer-controlled algorithm connects the CGM and insulin infusion pump to allow continuous communication between the two devices. Sometimes an artificial pancreas device system is referred to as a 'closed-loop' system, an 'automated insulin delivery' system, or an 'autonomous system for glycemic control.'

An Artificial Pancreas Device System will not only monitors glucose levels in the body but also automatically adjusts the delivery of insulin to reduce high blood glucose levels (hyperglycemia) and minimize the incidence of low blood glucose (hypoglycemia) with little or no input from the patient.

Medtronic monopolizes the global Artificial Pancreas Devices Systems market, holding a share about 100%.

North America is the largest market, with a share about 60%, followed by Europe, have

a share about 30 percent.

In terms of product, Threshold Suspended Device Systems is the largest segment, with a share over 60%. And in terms of application, the largest application is Hospitals

, followed by Clinics.
