## Abstracts

The global Aryl Peroxide market size is expected to reach \$ 1348 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Aryl Peroxides are a class of organic peroxides in which the peroxide functional group (–O–O–) is directly bonded to one or more aromatic (aryl) rings, such as benzoyl peroxide or dicumyl peroxide. They are widely used as radical initiators, curing agents, crosslinking agents, and polymerization catalysts in industries such as plastics, rubber, coatings, and pharmaceuticals, due to their ability to decompose and generate free radicals under heat or light. The supply chain of aryl peroxides starts with upstream petrochemical feedstocks, mainly aromatic hydrocarbons (e.g., benzene, toluene) and hydrogen peroxide or other oxidizing agents, which are processed by specialty chemical manufacturers through controlled oxidation and synthesis reactions. Midstream production is dominated by chemical companies with strong expertise in peroxide chemistry, involving strict safety, stabilization, and formulation processes due to the reactive and potentially hazardous nature of peroxides. Downstream, aryl peroxides are supplied to polymer producers, rubber manufacturers, composite material producers, and specialty chemical formulators, where they are used in applications such as polyethylene crosslinking, unsaturated polyester curing, epoxy hardening, and dental or pharmaceutical formulations, before reaching end-use industries including automotive, construction, electronics, and healthcare. In 2025, global Aryl Peroxide output was about 500,000 tons with 600,000 tons of capacity, average prices of USD 1,500–3,500 per ton, and gross margins around 26%.
