## Abstracts

According to our (Global Info Research) latest study, the global AS Interface market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

AS Interface is a globally standardized industrial networking solution that links sensors and actuators to a controller over a common data transmission path. It is an open technology supported by various automation vendors and leading manufacturers of sensors and actuators worldwide. The construction of AS Interface consists of four components which are, the network master in form of a gateway, number of network slaves which are input and output modules, a power supply to enable communication between master and slaves, and the yellow AS-Interface cable for wiring infrastructure. The master with gate-way function controls the system and initiates data exchange, manages communication with the slaves, with each slave having a unique address and informs the PLC, making it a deterministic networking solution.

Rise in adoption of process automation and safety standards in process industry, simple and quick installation of AS-Interface system with a minimum number of cables, safer transmission of data and power compared to wired devices and support from the government for the adoption of industrial automation in various industries are some factors driving the growth of AS Interface market.
