## Abstracts

ASA/PC is an alloy of polycarbonate PC and acrylate-styrene-propionitrile terpolymer ASA. It is a new type of polymer alloy, and its properties are similar to ABS. However, ASA has excellent UV resistance and yellowing resistance, good gloss, toughness and rigidity, and excellent heat resistance, antistatic and chemical resistance. ASA does not contain C=C double bonds and has a high glass transition temperature, but the low-temperature impact resistance is not as good as that of ABS under low-load conditions. After adding PC, the high-temperature deformation of the alloy is very small, and the impact resistance of the notch is greatly improved

According to our (Global Info Research) latest study, the global ASA-PC Alloy market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
