According to our (Global Info Research) latest study, the global ASA & PMMA for Automobile market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

PMMA/ASA is an alloy material formed by blending two plastic materials, PMMA (polymethyl methacrylate) and ASA (acrylonitrile-butadiene-styrene copolymer). PMMA/ASA inherits the advantages of PMMA and ASA, while overcoming their respective shortcomings. It is an engineering plastic with excellent comprehensive properties. PMMA/ASA has good optical properties, high transparency and bright colors. At the same time, the material has excellent weather resistance and ultraviolet performance, can maintain a good appearance and gloss for a long time, and is not prone to color difference, yellowing and other phenomena. In addition, PMMA/ASA also has the advantages of heat resistance, impact resistance, chemical corrosion resistance, etc., and can be applied in a wide range of industrial fields. In terms of application, PMMA/ASA is usually used in products that require high weather resistance and high transparency, such as automotive exterior parts, electronic product casings, outdoor billboards, and amusement equipment. For example, automotive exterior parts need to have good weather resistance and heat resistance to resist damage and deformation under various climatic conditions. In outdoor billboards and amusement equipment, UV resistance and impact resistance are required to ensure their long-term stability and safety.
