According to our (Global Info Research) latest study, the global Asbestos Cement Pipe market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Asbestos Cement pipes are strong, noncorrosive and light pipes made from mixture of Asbestos Fiber (Asbestos is a natural substance found underground in the form of rock) and Portland cement. Asbestos are recovered by rock crushing and mining for commercial cement pipes. Asbestos are used on cement pipes to increase flexibility and strength of pipes.

According to the Japan Cement Association, Japan's cement industry emitted about 40 million tons of carbon dioxide in 2020. And the cement industry became the fourth largest source of carbon dioxide emissions in the industrial sector after electricity, steel and chemicals. 60% of the cement industry's carbon emissions come from process emissions, 35% from combustion emissions and 5% from indirect emissions from electricity. According to our "Building Materials Research Institute", the global clinker capacity in 2022 was about 3.55 billion tons, and the global cement production was about 4.0 billion tons. According to the National Bureau of Statistics, China's cumulative cement output reached 2.118 billion tons in 2022.
