## Abstracts

According to our (Global Info Research) latest study, the global Aseptic Filling Decontamination Systems market size was valued at US\$ 850 million in 2025 and is forecast to a readjusted size of US\$ 1196 million by 2032 with a CAGR of 5.2% during review period.

An aseptic filling sterilization system is a complete system used to sterilize and decontaminate packaging containers, caps, pipelines, and the filling environment before aseptic filling. It typically consists of a container sterilization module (H<sub>2</sub>O<sub>2</sub>/VHP/UV/hot air), an aseptic isolation system (Isolator/RABS), an air filtration system (HEPA/ULPA), an automated transfer system, an online monitoring system, and a CIP/SIP system. This system solves problems inherent in traditional filling processes, such as high risk of microbial contamination, incomplete container sterilization, cross-contamination due to manual operation, inability to meet GMP/food aseptic regulations, and limited product shelf life. The aseptic filling sterilization system ensures that containers and the filling environment reach a verifiable sterile state before entering the filling process, serving as a core safety barrier in the aseptic filling production line. The product has an average price of approximately US\$900,000 per unit, with global sales of approximately 917 units.
