Aseptic packaging is a process whereby the product and the package are sterilised separately and brought together in a sterile environment. Aseptic packaging is often called 'drink boxes' and it allows perishable food products to be transported and stored without refrigeration for up to six months or more. It is used for foods such as milk and dairy products, puddings, fruit and vegetable juice, soups, sauces and products with particulates can be stored in aseptic packaging. The aseptic packages are typically a mix of paper (70%), polyethylene (LDPE) (24%), and aluminum (6%), with a tight polyethylene inside layer. Together these materials form a tight seal against microbiological organisms, contaminants, and degradation, eliminating the need for refrigeration. This report only focus on aseptic carton packaging for food products.
