Aseptic processing Restricted Access Barrier Systems (RABS) are advanced technologies used in the pharmaceutical and biopharmaceutical industries to maintain a high level of sterility during the manufacturing and processing of sterile drugs or products. RABS provide a controlled and enclosed environment to minimize the risk of contamination and ensure product integrity.

RAB?s are becoming increasingly popular within aseptic processing as they offer effective product protection by providing a high level of separation between operators and the critical aseptic core. By using a combination of a physical barrier and dynamic airflow, the product protection that it can provide approaches that of an Isolator and is often the barrier system of choice in some applications.
