The global Asher for Semiconductor market size is expected to reach \$ 1528 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

In 2025, the global shipment of Asher for Semiconductor was approximately 1,536 units, with an average selling price of 560,000 US dollars per unit and an average industry gross margin of about 40%. Asher for Semiconductor is dry plasma stripping equipment for semiconductor manufacturing, which efficiently removes photoresist from wafer surfaces via oxygen plasma ashing combining physical bombardment and chemical reaction. Featuring low damage, high uniformity and environmental friendliness, it supports 6? to 12?inch wafer processes and is widely used in logic chips, memory chips, power semiconductors and advanced packaging as critical front?end IC process equipment.

Asher for Semiconductor is core equipment for front-end chip manufacturing, and its industrial development is deeply bound to semiconductor process upgrading and capacity expansion. The technology focuses on low damage, high uniformity and environmental protection, continuously adapting to advanced processes and large-size wafers. The market features high technical barriers and concentration among leaders, while automation and intelligence have become core competitiveness. Driven by industrial chain self-control, domestic substitution is accelerating. Equipment is upgrading toward high integration, stability and full automation, benefiting from the long-term growth of integrated circuits, power devices and advanced packaging.
